OPEN·XCHANGE®

Open-Xchange OXtender for Mac OS X - Functions Overview

20090331

Open-Xchange Overview

- Leading solution in the Open Source Software (“OSS”) E-Mail and Groupware market
- Extensible collaboration platform to flexibly integrate applications and frameworks
- Offers “Smart Collaboration” as SaaS solution for ISP/Web Hosting companies (e.g., 1&1), telecom provider and IT outsourcing company (e.g., ACS) and on-premises solution for system integrators and resellers
- Provides proven hosting technology for enterprise customers
- Winner of many international awards

Synchronisation Open-Xchange to Mac OS X

- Synchronization of Open-Xchange Groupware to native Mac applications:

- » Open-Xchange E-mails will be synchronized with Mac Mail

- » Open-Xchange Appointments and task will be synchronized with Mac iCal

- » Open-Xchange Contacts will be synchronized with Mac Address Book

- » Open-Xchange Documents (InfoStore) will be synchronized with Mac webdav clients

Key-Features OXtender for Mac OS X

- Synchronization of contacts between Open-Xchange and Apple Address Book
- Synchronization of appointments and tasks between Open-Xchange and Apple iCal
- Open-Xchange's document manager, InfoStore, can be linked via WebDav to Apple's file manager, Finder
- Automatic synchronization with all connected services and devices, for example MobileMe, iPhone, iPod, smart phones and cell phones of other manufacturers with support for iSync.

Synchronisation OX <-> Mac OS X <-> Devices

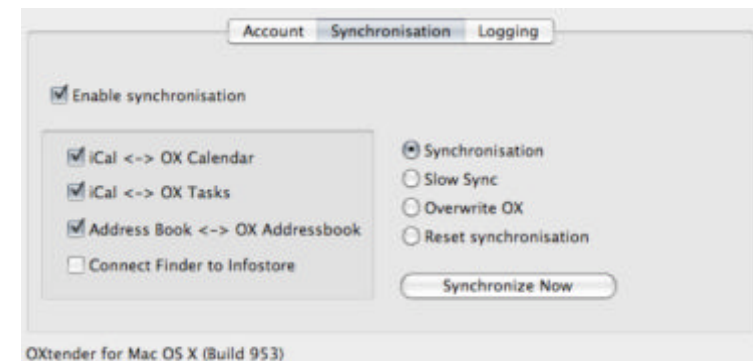

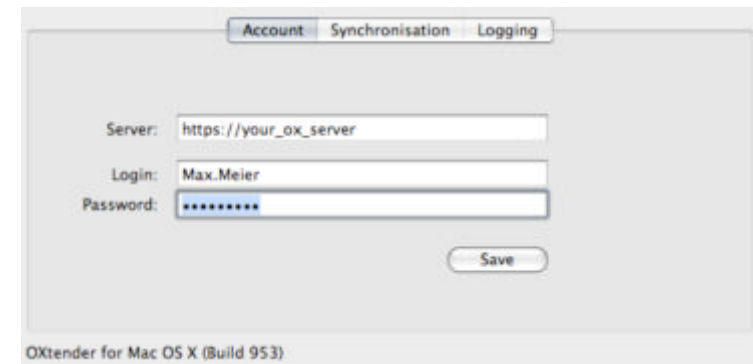

- All mobile devices connected to the Mac, like iPhones, iPods and cell phones from other manufacturers, can access Open-Xchange data through iSync
- MobileMe synchronize OX appointments and contacts via its “over the air” push service to all other devices if one system is running the Oxtender
- All data is maintained centrally on the Open-Xchange Server
- Even without a connection to the Internet, users can continue to work without interruption.

Configuration OXtender for Mac OS X

- Configuration at the Mac OS X System Preferences application
- Server address, user account and password for the Open-Xchange Server
- Synchronization settings for OXtender for Mac OS X
- Slow-Sync to compare the data on the Server and your Mac OS X
- Overwrite Open-Xchange Data
- Reset Synchronization
- Choose Modules for synchronization
- Connect Finder to InfoStore
- Logging
